AS Contrera
26673 Lawrence
Center Line, MI 48015

To Whom in may concern:

AS Contrera installed an HVAC system in our large 40,000 square feet building to help our elevated carbon monoxide levels. The installation included a single heated makeup air unit, two exhaust fans, roof access ladder, controls and carbon monoxide sensors. The job went as planned, on time and on budget.

We are happy and our team mates are safer from the large reduction in carbon monoxide levels that are at or below 2.0 ppm. We have turned off all our unit heaters and the system has kept our building at a comfortable temperature during this cold winter.

Sincerely,

Eric Retting
Plant Manager
